Certificate

AWS Certified Cloud Practitioner - AWS02707072 (2022)
• Description: The certification demonstrates knowledge of AWS Cloud and its basic global infrastructure, as well as key services and use cases. It also verifies knowledge of AWS security and compliance measures and demonstrates an understanding of billing, pricing, and support models.

Experience

Software Engineer, Crypto Project　　　2021 - 2022
(Remote Freelance)

• As the lead software engineer, I collaborated with a diverse team of 8 developers from different parts of the world to name a few India and Netherlands to ensure the project was delivered on time and within budget. I provided technical expertise and oversight throughout the development process, working closely with team members to identify and resolve issues, streamline workflows, and optimize performance.

• Utilized my expertise in NextJS and React to ensure the project not only maintained a high SEO ratio but also optimized performance. Specifically, I leveraged my understanding of React to utilize Memo and other internal tools, avoiding unnecessary re-renders that could negatively impact performance. This resulted in increased visibility and traffic to the application, as well as a seamless user experience.

• Provided expert consultation on the potential benefits and drawbacks of integrating AWS into the founder application, utilizing my software engineering background to help the team make informed decisions about the project's technology stack.

• Learned the basics of Solidity to facilitate communication with the Solidity developer and accurately convey the founders' requirements, leading to smoother collaboration and better outcomes for the project.

• Maintained close oversight of the product development process, ensuring timely completion of tasks and proactively identifying and addressing any issues that arose. This resulted in a successful launch of the product.

• Stayed up-to-date on the latest developments in Solidity/Web3 by attending Consensus 2022, expanding my knowledge and staying ahead of the curve in this rapidly-evolving field.

Software Engineer, Wayfair　　　2019 - 2020
Boston, MA

• Collaborated closely with cross-functional teams, including product managers and engineers, to revamp the UI/UX of Wayfair's in-house application. This resulted in a 45% increase in application submissions and total orders placed, demonstrating the positive impact of the new design.

• Led the integration of post-order for Wayfair's International Financing product using Agile methodology, resulting in a 20% increase in orders within Canada.

• Mentored and trained new hires to improve team productivity, resulting in a 20% increase in completed tasks and smoother onboarding process.

• Integrated API monitoring through DataDog and confirmed that contracted expectations were being met, resulting in improved API response time with 3rd parties by 30%.

• Critically debugged post launch performance issues relating to the loading of site messaging.

• Debugged post-launch performance issues relating to the loading of site messaging, resulting in a 50% decrease in loading time.

• Collaborated with vendors to successfully launch new products and improve API changes. Successfully contributed to a 15% increase in revenue.

Education

BS in International Business, Temple University Japan Campus   2009 - 2014
Tokyo, Japan

- Volunteered as a tutor at the school, helping high school students improve their English skills and become more confident communicators.
- Achieved first place in both the Ted Mills Computer Information Systems Business Venture Competition and the Asian Business Venture Competition, showcasing my ability to apply my technical and business knowledge to real-world challenges.
- Led a team in providing support to Fukushima following the 2011 earthquake in Japan, demonstrating my leadership skills and commitment to making a positive impact.
- Participated in school orientations, providing guidance and support to incoming students and helping to ensure a smooth transition to college life.

Projects

Jobs,   2023

Introduction:
JOBS is a revolutionary job posting website designed to help recruiters find candidates who were recently laid off or actively looking for new opportunities, addressing a common problem in the job market. As a Fullstack Developer, I played a critical role in developing JOBS. I was responsible for developing the front-end using Next.js/React, TypeScript, and TailwindCSS, and building the back-end server with Express.js. I also utilized an amazing database such as PostgresSQL to ensure the scalability and reliability of the application.
Notably, I implemented security features to protect user data by using Next-Auth to hash the session in a JWT format. In addition, I designed the user interface to be responsive and easy to use, with a card style job/candidate viewing interface and candidate profiles that include resumes, work history, education, skills, and other relevant information.

As a committed developer, I plan to continuously improve and update JOBS to meet the evolving needs of recruiters and job seekers alike. Future plans include implementing more advanced search filters, enhancing the user experience by adding more interactive features, and integrating machine learning algorithms to better match job seekers with job openings.

Description:
The website includes a job search functionality with filters for location, experience level, and whether the candidate has been recently laid off. This feature provides a seamless and interactive experience for users with a card-style job/candidate viewing interface. I also developed candidate profiles that include resumes, work history, education, skills, and other relevant information. These profiles allow recruiters to gain a comprehensive understanding of each candidate and make informed decisions.

Technologies:

Front-end development: Next.js/React, TypeScript, HTML, CSS, JavaScript
Back-end development: Node.js, Express.js
Database: PostgreSQL
Authentication: Next-Auth, oAuth
Hosting: Vercel (Backend and Frontend)
